

Angular / Angular JS application developer

Position: Permanent (Full-time/Part-time)

Location: Virtual / Cambridge / London

Salary: Dependent on experience

Benefits: Company Pension, Growth opportunities, Flexible working, Training, Positive people, Creative virtual workplace.

Your favourite beverages, replacement hip and knee joints, aeroplane parts, and cosmetics are just some of the things our clients make.

Bubble® PPM software helps medical device developers, aerospace manufacturers, and many others, deliver mission critical projects in a controlled, reliable way. Our software provides them with a single source of truth for all of the project and portfolio information they need. It truly does have a role in keeping people walking, stopping planes from falling out of the sky, and the creation of many other products and services that keep our world moving!

Our business is growing fast, offering a market beating product that solves seemingly intractable problems in one of the toughest information management domains around. So now is a great time for the right front end software engineer to join our team and accelerate our growth even further. We're based in Cambridge and London UK, but because of Covid, for the foreseeable future we will be remote working. We work hard with the best tools we can find to support one another and keep our team culture thriving, as well organising meet ups in Cambridge or London around once a month when circumstances allow.

Bubble® may be the perfect next step in your career if you want a company:

- That treasures its start-up culture, while building effective client relationships over many years.
- Where your thoughts, experiences and views will be valued and acted upon.
- Providing the opportunity to stretch yourself and develop your coding, dev-ops, delivery, and team working skills. Coached by recognized leaders in their fields.
- Offering the opportunity to grow a modern cloud hosted platform, built with great tools in a disciplined agile environment.

About you

More than anything, we're looking for that responsive, resilient and collaborative someone who adds to the creativity of our current team. Naturally you design and build high quality software to create secure, efficient, and reusable solutions. But more than that, you get under the skin of problems and existing code, really figuring out what makes it tick instead of skating over the surface looking for the fastest route to a fix. You enjoy the unfamiliar and new, pushing yourself to climb an initially steep learning curve in a supportive, open and sharing team. You embrace structured agile processes to drive collaboration that gets to the very best outcome, thoughtfully iterating improvements as new understandings of the problem domain emerge.

If you tick those boxes, we'd love to meet with you if you enjoy getting stuck in, learning fast, and creating great software – especially if you bring relevant experience that we don't often see.

We'd love you to be ready to deliver right now using:

- HTML 5, CSS and supporting tools (preferably SASS)
- Modern Angular
- A modern state management technology adapted to Angular (NGRX and NGXS are two popular examples)
- Appropriate build tools such as webpack and npm

It's a short list, but you really need to know it inside out.

You'll also be working with:

- Angular JS (we're actively migrating away from it to Angular, but there's still a lot around)
- AWS
- UI/UX design
- RESTful API consumption
- Python Django / Django Rest Framework
- Postgres
- Docker and Kubernetes
- A range of agile process management tools, including Bubble PPM itself.

Interested?

Please e-mail a CV, or contact us, using the following details:

recruitment@bubblegroup.com

Important notes:

- This role is UK based and open to candidates already based/authorized to work in the UK.
- We will acknowledge role-related questions, communications, and candidate submissions.
- Sorry, but we will not consider applications for contract/agency work.

Bubble® was founded in 1999 as an Innovation consultancy and is now a leading provider of Project and Portfolio Management software. It serves multi-national clients from bases in London, Cambridge, and Vancouver. Traditionally focused towards Innovation, New Product Development and Engineering organisations, its also experiencing growth in other areas including utilities, IT and the public sector.
